

(a) What the four runs compared

Condition A

bare-metal
Python 3.13
ORT 1.29.0
Debian 13

Condition C

containerised
Python 3.9
ORT (unpinned)
Debian 11

measured Δ = +45.6 % latency, -9.2 pp CPU,
-3.7 °C peak, -0.47 W

three factors co-vary

execution mode
interpreter + runtime version
base image

Δ is not attributable to any one of them

(b) Design required for attribution

run	execution	Python	ORT	base image
-----	-----------	--------	-----	------------

A	bare-metal	3.13	1.29.0	Debian 13
----------	------------	------	--------	-----------

$\updownarrow$ B-A
containerisation

B	container	3.13	1.29.0	Debian 13
----------	-----------	------	--------	-----------

$\updownarrow$ C-B
runtime version

C	container	3.9	1.19.2	Debian 11
----------	-----------	-----	--------	-----------

not performed here; specified so the comparison can be decomposed
